

EECS RULES FACT SHEET 5

TYPES OF ENERGY INPUTS AND TECHNOLOGIES

The attached tables set out the permissible energy inputs and technologies.

Document Reference	AIB-EECS-FS05
Version Number	5
Release	7.8
Date of Release	15 July 2024
Reason for Release	Addition of footnote on Solar Technology Code, correction of typos in Fuel Codes, Update lay-out
Author	EECS Unit

EECS RULES FACT SHEET 5:
TYPES OF ENERGY INPUTS AND TECHNOLOGIES

Version	Date and Author	Description
7.7 v5	2/12/2019, EECS Unit	Addition of valid T & F Codes
7.7 v6	15/07/2024, EECS Unit	Addition of footnote on Solar Technology Code, correction of typos in Fuel Codes (F01040203 and F01030600), update lay-out

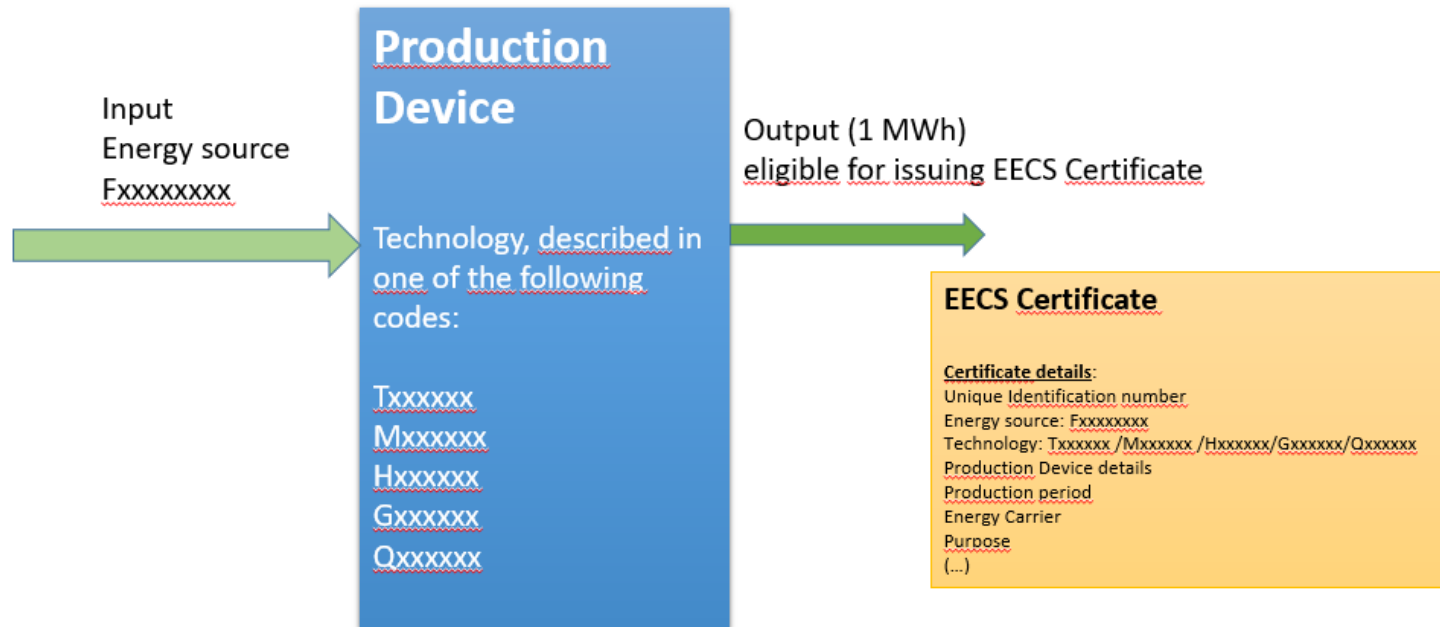

Introduction

This fact sheet establishes the permissible values of energy source and type of Originating Production Device as referred to in EECS Rules section C.3.5.4 (f) resp. (g).

The Fuel (energy source) Code on an EECS Certificate establishes the energy source from which Output, for which the EECS Certificate is issued, was generated.

The Technology Code on an EECS Certificate establishes the technology of the production device which generated the Output, for which the EECS certificate is issued.

On each EECS certificate, one code is mentioned for the Input (energy source) and one for the Technology.

TECHNOLOGY CODES FOR PRODUCTION OF ELECTRICITY: TXXXXXX

TECHNOLOGY CODES for Methane production: MXXXXXX

By definition, certificates with technology codes starting with MXXXXXX (Methane) are complying with the technical rules for grid injection, as this category of technology codes is used for gaseous energy carriers that comply with the technical standards for injecting gas in the natural gas grid.

Level 1		Level 2		Level 3		Full code
Code	Description	Code	Description	Code	Description	
01	Anaerobic digestion	00	Unspecified	00	Unspecified	M010000
		01	Fermentation to biogas	00	Unspecified	M010100

Permissible Combinations of Technology Code and Fuel Source Code for Electricity Production ^{5, 6}

Technology code	Fuel source code	Comments
T01xxxx <i>Solar – all forms</i>	F01040100 <i>Renewable > Heat > Solar</i>	<i>While solar power is actually energy conveyed by photons, it has been categorised under “heat”</i>
T02xxxx <i>Wind – all forms</i>	F010501xx <i>Renewable > Mechanical source/other > Wind</i>	<i>All forms of wind power, whether onshore or offshore</i>
T03xxxx <i>Hydro-electric head installations</i>	F010502xx <i>Renewable > Mechanical source/other > Hydro & marine</i>	<i>All forms of hydropower, whether run-of-river, storage head, or pumped storage</i>
T04xxxx <i>Marine – all forms</i>	F010502xx <i>Renewable > Mechanical source/other > Hydro & marine</i>	<i>Marine power, which uses mechanical energy from tidal currents, waves, currents or pressurised water</i>
T05xxxx <i>Thermal – all forms</i>	F00000000 <i>Unspecified</i>	<i>Thermal power uses heat energy from combustion, geothermal etc., and one of the below. Avoid it, as it does not categorise the fuel or heat source</i>
	F0100xxxx <i>Renewable > Unspecified</i>	<i>Any renewable fuel that cannot be further specified</i>
	F0101xxxx <i>Renewable > Solid</i>	<i>Any combustible renewable solid fuels including: Municipal waste, Industrial and commercial waste, Wood, Animal fats and Biomass from agriculture</i>
	F0102xxxx <i>Renewable > Liquid</i>	<i>Any combustible renewable liquid fuels including: Municipal biodegradable waste, Black liquor, Pure plant oil, Waste plant oil and Refined vegetable oil</i>
	F0103xxxx <i>Renewable > Gaseous</i>	<i>Any combustible renewable gaseous fuels including: Landfill gas, Sewage gas, Agricultural gas, Gas from organic waste digestion, Process gas and Bio natural gas</i>
	F0104xxxx <i>Renewable > Heat</i>	<i>Any form of renewable power from heat, including: Solar, Geothermal, Aerothermal, Hydro-thermal and Process heat</i>
	F010500xx <i>Renewable > Mechanical source/other > Unspecified</i>	<i>Any form of thermal renewable power from a mechanical source</i>

⁵ Notation: T99xxxx or F9999xxxx, where T and F denote technology and fuel codes, 99 or 9999 is the second two or four characters of the code, and xxxx means that all other codes are included. Thus T03xxxx includes T030000, T030100, T030200, T030300 and T030400

⁶ This relates to electricity only, and to the combinations of fuel source and technology which exist when a GO is issued for consumption of the initial source of that energy, rather than as a result of conversion of a GO from another energy carrier

EECS RULES FACT SHEET 5: TYPES OF ENERGY INPUTS AND TECHNOLOGIES

Technology code	Fuel source code	Comments
	F02xxxxxx <i>Fossil – all forms</i>	<i>All combustible fossil fuels, whether solid (coal, peat, waste ...), liquid (oil, liquid gas, petroleum-based ...), gaseous (coal-derived, petroleum, municipal gas, process gas ...)</i>
T06xxxx <i>Nuclear</i>	F03xxxxxx <i>Nuclear</i>	<i>Any form of nuclear power including heavy-water, light-water, breeder and graphite reactors running on UOX, AGR and MOX fuels</i>
T07xxxx <i>Other</i>		<i>Unforeseen eventualities which do not fit into another category. Can be used with any Fuel code, but avoid using it as it gives no indication of technology</i>

Note that:

Any GO which breaks these rules is inaccurate and thus in breach of Directive 2009/28/EC.

Such GOs which are already held on member registries should be considered to have the appropriate generic technology code for the fuel source – for instance “hydropower using solar heat energy” should be considered to be “solar photovoltaic using solar heat energy”. On request, the registry which issued such GOs shall inform the registry in which the GO is currently held of the correct T/F code combination (in the above example, either hydropower or solar power).
