Regulations on Power Purchase Agreements (PPAs)						
In terms of disclosure, how do you treat energy that is bought in a						
competitive setting or in a long-term power purchase agreement?	The calculation of the national mix for disclosure purposes in Portugal					
	takes into consideration the emitted GOs and the bilateral contracts					
	arrangements (PPAs) without GOs emitted. The disclosure regime in Portugal makes possible the use of cancelled GOs and PPAs for					
	disclosure purposes of the electricity suppliers. In order to accept					
	PPAs it is crucial that those have not GOs emitted.					
	Additionally, regulated CfDs with renewable producers are obliged to sell emitted GOs in a competitive auction, with the revenues delivered					
	to the SoLR as Last Resort Aggregator in order to reduce the over-cost					
	with renewables (the over-cost results from the difference between					
	the guaranteed tariff and the wholesale market price) supported by					
	the Last Resort Aggregator (in the end supported by end consumers					
	under the regulated access tariff).					Please describe
Who is reponsible for disclosing/cancelling the GOs for competitive settings	Under the portuguese regulatory framework, the market suppliers are					
or long-term purchase agreements?	the only entities responsible to guarantee the disclosure of the energy mix of their commercial offers, by cancelling acquired GOs (using the					
	mentioned auctions above or buying in the OTC market) or using PPAs
